64-BIT RANDOM ACCESS MEMORY (With 3-State Outputs)

DESCRIPTION — The '189 is a high speed 64-bit RAM organized as a 16-word by 4-bit array. Address inputs are buffered to minimize loading and are fully decoded on-chip. The outputs are 3-state and are in the high impedance state whenever the Chip Select (CS) input is HIGH. The outputs are active only in the Read mode and the output data is the complement of the stored data.

- 3-STATE OUTPUTS FOR DATA BUS APPLICATIONS
- BUFFERED INPUTS MINIMIZE LOADING -
- ADDRESS DECODING ON-CHIP
- DIODE CLAMPED INPUTS MINIMIZE RINGING

ORDERING CODE: See Section 9

	PIN	COMMERCIAL GRADE	MILITARY GRADE	PKG
